(57) **ABSTRACT**

An inbred corn line, designated SLD04, the plants and seeds  
of the inbred corn line SLD04, methods for producing a corn  
plant, either inbred or hybrid, produced by crossing the  
inbred corn line SLD04 with itself or with another corn  
plant, and hybrid corn seeds and plants produced by crossing  
the inbred line SLD04 with another corn line or plant and to  
methods for producing a corn plant containing in its genetic  
material one or more transgenes and to the transgenic corn  
plants produced by that method. This invention also relates  
to inbred corn lines derived from inbred corn line SLD04, to  
methods for producing other inbred corn lines derived from  
inbred corn line SLD04 and to the inbred corn lines derived  
by the use of those methods.
